Abstract: Through the early-20th century, the power of the De Beers’ diamond cartel was dwindling. Its resurrection came with WWII. The company’s reversal of fortune required the construction and maintenance of relations with romantic couples, industrial diamond users, multiple government agencies and diamonds themselves. This presentation will examine De Beers’ accumulation and the translation of these qualitative relationships into capital.
Wartime Accumulation: De Beers v. US, UK and South Africa, 1889-1952

NOTE: De Beers is the indexed market capitalization (preference and deferred shares, plus debentures). S&P500, Banker’s and SA Mines are indexes constructed for public corporations in the US, the UK and South Africa. De Beers, Banker’s and SA Mines are adjusted for the UK-US Exchange Rate.

1899-1934: Data points are every five years and represent a ten-year moving average. 1939-1952: Data points are annual.
SECOND FIGURE

*Catalyzing Tradition: Diamonds & Marriage, 1929-1960*

NOTE: Rough and cut denote US imports of rough and cut stones in millions of dollars. Marriage rate denotes the number of marriages per 1000 adult women
Diamond, Copper and Steel Use, 1930-1947

NOTE: Series are indexed (1931-1940 = 100). Use is based on 'apparent consumption' as reported in the USGS Minerals Yearbook. Apparent consumption is calculated as production plus imports minus exports minus change in stockpiles.
**Fourth Figure**

**Diamond Imports: Industrials v. Gems, 1929-1955**

DATA: USGS, Minerals Yearbook; Bureau of Economic Analysis.
NOTE: Both series are the dollar value of imports and U.S. GDP. Industrial diamonds are the value of all imports. Gem imports are the value of rough stones plus cut stones. The value of cut stones have been adjusted for the imputed price of rough stones to exclude the value added from cutting.
