# Third Lecture Labour Value: Marxist Capital

#### Capitalism: conflict over surplus

- · Purpose: from defense to destruction of capitalism
- · Labour: from many to one factor of production
- Surplus: history, labour and class conflict
- Forms of surplus: physical and political
- · Political economy: social totality, theory, ideology

### The labour theory of value

- Surplus and surplus value
- The Physiocrats and land, the classicists and labour
- Value and labour time
- Socially necessary labour
- Concrete and abstract labour
- Labour power
- Exploitation: labour vs. labour power
- Simple circulation: reproduction of the worker
- Expanded circulation: capital accumulation
- · Constant capital, variable capital and surplus value
- Value theory and capitalist development
- Capitalist fractions

#### Controversies

- Value theory: qualitative and quantitative.
- The transformation problem (I): from values to production prices
- Rate of profit, rate of exploitation and the organic composition of capital
- The transformation problem (II): from production prices to market prices
- A labour theory of value without perfectly competitive equilibrium?
- Inner logic: Samuleson's redundancies
- Inner logic: Joint processes and Steedman's impossibilities
- Existence: does labour value exist?
- Existence: can the value equations be specified?

### Quality and quantity

- Marx and the neoclassicists: the common ground
- "Bottom up": from production to distribution

#### The Neo-Marxist revision

- Power without value
- Time to rethink capital

# **Circulation**

Simple circulation: the reproduction of the worker

 $C \not \to M \not \to C$ 

Expanded circulation: capital accumulation

 $M \rightarrow C \rightarrow M + \Delta M$ 

Enters production:

### $M \rightarrow C \rightarrow Production \rightarrow C \rightarrow M + \Delta M$

Decomposition: constant capital (*c*), variable capital (*v*), surplus value (*s*):

 $M \rightarrow C \rightarrow (c+\nu) \rightarrow (c+\nu+s) \rightarrow C \rightarrow M + \Delta M$ 

# Historical Stages and "Fractions of Capital"

Sheer force: money capital

$$M \rightarrow M + \Delta M$$

Commercial: arbitrage capital and the "extensive" empires

### $M \not\rightarrow C \not\rightarrow M + \Delta M$

Productive: industrial capital and the "intensive" empires

 $M \rightarrow C \rightarrow Production \rightarrow C \rightarrow M + \Delta M$ 

### The Transformation Problem: From Values to Prices of Production

Decomposing the value of a commodity, with constant capital (*c*), variable capital (*v*), surplus value (*s*), the initial investment (*M*) and the profit ( $\Delta M$ ):

$$c + v + s = M + \Delta M$$

**Rate of profit**  $\pi$  (ratio of profit to invested capital)

$$\pi = \Delta M / M$$

Assuming the surplus value (s) is equal to the profit ( $\Delta M$ ):

$$\pi = s / (c + v)$$

Rate of exploitation  $\varepsilon$  (ratio of surplus value to the value of labour power)

 $\varepsilon = s / v$ 

**Organic composition of capital**  $\theta$ (ratio of constant capital to variable capital, or "mechanization")

 $\theta = c / v$ 

Divide the numerator and denominated of the rate of profit equation by *v*:

$$\pi = (s / v) / (c / v + 1)$$
$$\pi = (\varepsilon) / (\theta + 1)$$

# The Labour Theory of Value: One Question, or Two?

Labour Process 
Commodity (Labour Value) 
Price

- 1. Are prices derived from labour values?
- 2. Do commodities "have" a labour value?
